

Stocktaking time is near!

Yes – that dreaded time is nearly upon us. If you are looking for a fast and easy method of stocktaking then the new Honeywell EDA 51 Android scanner is your answer.

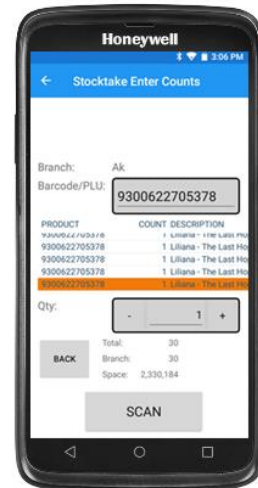

Coupled with the Kudos Skandroid software module the system is fast and reliable, Kudos Skandroid allows you to download the stock file from CI for verification during the scanning process. This way any foreign barcodes accidentally scanned will be rejected at source meaning a more reliable data set is captured.

The default scanned quantity of 1 can easily be incremented by touching the + key. If the quantity of 1 is correct you may simply move on and scan the next item. The ability to page through your entries helps in rechecking previous scans.

The large Scan button makes scanning more efficient. Physical buttons on the side of the Honeywell EDA51 may also be used for those that find this more ergonomically friendly. For those retailers scanning swing tags or high stacked boxed as in footwear the addition of a scan handle may provide an easier scanning angle.

Communications between your PC and the Android device may be via wireless connection or by file download. An option exists for scanning the stocktake without having a product file loaded for verification purposes.

In addition to stocktaking the Skandroid application can be used for stock enquiry and branch transfers.

Honeywell ScanPal EDA51

The ScanPal™ EDA51 mobile computer, built on Android™, features the perfect combination of integrated scanning, powerful processing, intuitive touchscreen interface, and robust connectivity in a rugged, slim ergonomic design. It's ideal for small to medium-sized businesses to increase productivity in light duty retail, DSD, pickup and delivery, and field service applications.
